**THE NEW COBUS 3000 –
MORE FASCINATING THAN EVER**

COBUS 
INDUSTRIES

EFFICIENT AND DYNAMIC

THE CONCEPT

The COBUS 3000 transports more passengers than any other bus of this size. A higher capacity means smaller bus fleets – and, as a result, lower investment, reduced personnel costs and minimal maintenance downtimes.

And, in addition to this, it has a guaranteed service life of 25 years. The new COBUS 3000 impresses with its unparalleled fuel consumption and it is now even more dynamic and convenient.

Find out for yourself.

CONVENIENCE AND SAFETY

With the COBUS 3000, the enjoyment of the journey begins right at the airport: It takes the passengers to their plane comfortably, safely and in a convenient and relaxed atmosphere. High-quality materials add to the positive impression of the interior. Three extra-wide double doors on both sides as well as the pneumatic “kneeling” system allow the passengers to quickly enter and exit the bus.

ERGONOMICS AND FUNCTION

Traffic at airports creates particularly difficult conditions for drivers. Therefore, the cockpit of the COBUS 3000 has a functional and ergonomic design: The instruments are logically arranged, the steering column and the driver's seat are adjustable. Large mirrors and the new, optional 360° panoramic view feature provide the driver with a safe and stress-free all-round view.

DRIVE CONCEPTS

With its highly efficient diesel engine, the new COBUS 3000 complies with the highest emission standard – EUROMOT IV. Its fuel consumption values are unparalleled: It only needs the equivalent of half a thimble full of diesel per passenger. Moreover, the COBUS 3000 is available with a natural gas engine (Compressed Natural Gas – CNG) and with an electric drive.
